

## Finally, a veterinarian experience that revolves around YOU.

(And not the other way around.)

Welcome to **THRIVE**, where every location is carefully designed with both you and your pet in mind.

Your THRIVE visit begins when you're greeted by a compassionate "Pet Concierge," who will check you in quickly. (After all, who's busier than you?)

We created a soothing environment free of distractions, odors and noises to make our clinic more pet friendly. Your pet's sensitive ears won't have to endure sounds that other clinics have that can make them anxious.

Your unique experience continues in the exam room with our highly skilled veterinary team. To improve accuracy and save time, we use the latest technology to review your pet's medical records, show x-rays, and review information with you.

Once your pet has been examined and treated—and our team has provided medical information in easy-to-understand way—you're able to check out right in the privacy and convenience of the exam room.

All of our technology and streamlined processes create efficiencies that save you time and money, while allowing us to focus on what matters most: *quality care for your pet.*

Come experience the difference for you and your pet at **THRIVE**.

## THRIVE Q&A

### ARE THERE OTHER PACKAGES?

THRIVE offers a wide range of treatment packages for a variety of symptoms and diseases.

Each treatment solution is customized for your pet's individual needs.

To learn more about our other treatments or to request an estimate, please contact your nearest THRIVE location.

### HOW MUCH IS A CHECKUP?

THRIVE offers a comprehensive Nose-To-Tail Pet Exam for just \$15 per visit.

Our Pet Exam fee represents a great value that we are proud to offer every visit.

### WHY MULTIPLE VACCINES?

As young pets reach 6 - 8 weeks of age, their antibody levels decline and leave them at risk for developing illnesses.

THRIVE veterinarians administer vaccines every three to four weeks from 6 - 8 weeks of age to 14 - 16 weeks of age.

Vaccine boosters serve as preventive coverage to your young pet's immune system.
